INTRODUCTION

INTRODUCTION

This publication is the third in an annual series and presents statistics on the manufacturing industry in Alberta.

Data compiled are based on information collected in the 1975 Census of Manufactures. The census is conducted annually by Statistics Canada and information is shared in common with Alberta Bureau of Statistics.

Statistics are disaggregated to the finest level of industrial and geographical detail possible, in concurrence with The Statistics Bureau Act, 1958. Principal manufacturing statistics are collected by province, census divisions and urban municipalities. In addition, statistics are classified by the following types of industry activity: agricultural processing, petrochemical, metals and equipment, forestry products, non-metallic minerals and manufacturing industries.

PUBLICATION CONTENT

Section I presents fifteen tables on principal manufacturing statistics at various geographical levels.

Table 1: Principal Manufacturing Statistics by Industry, Alberta, 1975

Tables present principal statistics by industry group and total industry for Alberta.

Table 2-7: Principal Manufacturing Statistics by Industry, Major Centres, Alberta, 1975

Tables present principal statistics by industry group and total industry for Calgary, Edmonton (proper), Edmonton (metro), Lethbridge, Medicine Hat and Redcliff, and Red Deer.

Table 8: Principal Manufacturing Statistics by Industry Group, Census Divisions, Alberta, 1975

Tables present principal statistics by industry group for Census Divisions in Alberta. More detailed breakdowns of the data for these areas are not available.

Table 9: Principal Manufacturing Statistics, Selected Centres by Census Divisions, Alberta, 1975

Tables provide principal statistics for selected centres in Alberta. The data relate only to the total manufacturing activity taking place in the centres listed.

Tables 10 - 15: Principal Manufacturing Statistics, Type of Industrial Activity by Component Industries, Alberta, 1975

Statistics are aggregated by the following industrial activities: agricultural processing, petrochemicals, metals and equipment, forestry products, non-metallic mineral products, and n.e.s. manufacturing industries.

Section II presents detailed Employment Statistics for Manufacturing Industries by industry for Alberta. For easy reference Section II tables are numbered the same as the corresponding tables of Section I, but are suffixed with an 'A' to avoid confusion.

A similar breakdown of detailed employment statistics by major centre, census division and type of industrial activity by component industry is available upon request.

NOTE: Addibility of Data - Statistics are disaggregated to the four-digit SIC component level. When compiling data to the two-digit level, do not add figures for both the three-digit industries and the four-digit components, as this will result in double-counting.

DEFINITIONS

Principal Manufacturing Statistics - Consist of: the number of manufacturing establishments reporting; number of employees; total wages and salaries; cost of materials and supplies and of fuel and electricity; value of shipments; and value added.

Establishment - Smallest operating unit capable of reporting specified input and output data; usually a plant or mill.

Employee - Employees refer to production and non-manufacturing employees engaged in the manufacturing industry, including working owners and partners.

Salaries and Wages - Salaries and wages are reported before income tax deductions and employee benefits, and comprise all man-hours paid for regular work, overtime, paid leave, bonuses, commissions, etc.

Production Workers - Employees engaged in processing and assembling, storing, inspecting (including quality control), handling, packing, warehousing, etc. Include employees in related activities such as maintenance, repair, janitorial and watchmen services and working foremen doing similar work to that of employees they supervise.

Non-production Worker - Employees on the executive, administrative and sales staff.

Cost of Materials and Supplies, Fuel and Electricity - Consumption of purchased items at laid-down cost. Includes intercompany and intracompany transfers, contract work by others and motor fuel consumption.

Value of Shipments of Goods of Own Manufacture - Gross value of goods produced from its own materials by the reporting establishment, or for its account. Value is net of discounts, returns and allowances, sales tax, excise taxes and duties, returnable containers and common or contract carriers' charges for outward transportation (but not of own carriers' delivery expense). It includes repair and custom revenue, transfers to reporting units of the same firm, all exports, and book value of own products shipped on a rental basis. Unsold domestic consignment shipments are not included. For two industries, the fabricated structural metal industry and aircraft and aircraft parts manufacturers, value of production is shown.

Value Added - Net output as measured by gross output less purchased commodity inputs used and contract work by others; or, value of shipments of own manufacture plus net change in inventory of goods in process and finished goods, less cost of materials and supplies used, fuel and electricity.

NOTE: In previous Bureau publications the net change in inventory of goods in process and finished goods was not taken into account in calculating value added.

Standard Industrial Classification (SIC) - SIC is a method of uniformly categorizing establishments engaged in the same or a similar kind of economic activity. Results of the 1975 Census of Manufactures, as presented in this publication, utilize the 1970 revision of the Standard Industrial Classification. A complete description of these SIC codes is found in Appendix B, page 117.

METHODOLOGY

Data are collected by three main types of questionnaires, mailed to establishments classified to the manufacturing industries: the "long form" is sent to large establishments, requesting detailed information on principal statistics and on commodity inputs and outputs, the "short form" is sent to small establishments, asking for minimum principal statistics and no commodity detail, and the "head office schedule" is sent to head offices and ancillary units, where these locations are physically separate from the location of manufacturing activity.

The criteria for differentiating "large" and "small" establishments varies by industry and province (and through time) but, in general, is governed by the objective of minimizing respondent burden without the loss of a significant quantity of commodity data.

The questionnaires are completed for the fiscal year ending as early as April 1 of the reference year or as late as March 31 of the following calendar year.

CHANGES IN FORMAT

In the interpretation of manufacturing data for Edmonton, the 1971-1973 statistics for Edmonton only include data for industries located immediately east of the city and in Sherwood

Park. (Fort Saskatchewan, St. Albert , Gibbons, Morinville, Bon Accord, Legal, Strathcona County No. 20 and Sturgeon M.D. 90 are not included.)

The 1974 and 1975 statistics for Edmonton are presented in two ways. Edmonton (proper) statistics, which show data only for the City, are available. Edmonton (metro) statistics, which include Edmonton (proper) plus the areas defined as part of the Edmonton Census Metropolitan Area (Fort Saskatchewan, St. Albert, Morinville, Bon Accord, Gibbons, Legal, Strathcona County No. 20 and Sturgeon M.D. 90) are also shown.

Data for SIC 2513 - Sawmills and Planing Mills for the period 1971-1973 are not comparable with publication years 1974 and 1975. Statistics for this industry group in 1971, 1972 and 1973 were obtained from Alberta Energy and Natural Resources. Statistics for 1974 and 1975 were obtained from the Census of Manufactures conducted by Statistics Canada.

In previous years, statistics for Bow Island were included in Medicine Hat and Area. In the 1975 publication, Bow Island is a separate location.

In addition, a further refinement in the presentation of the statistical tables has been made by showing not only the name of the industry or industry group for which principal statistics are provided but also the Standard Industrial Classification code associated with it.

In some instances, the number of establishments is identified by three dots instead of a numerical value. This indicates that the establishment is a Head Office where no actual manufacturing occurs. Administrative statistics for employees and salary/wages are included, wherever possible.

PUBLICATION CRITERIA

Statistics presented in this publication conform to confidentiality guidelines of The Statistics Bureau Act, 1958, which prevents disclosure of information pertaining to individual establishments. In practice, this means that for the Census of Manufactures, no data except for number, type and location of establishments are shown for industrial or geographic aggregations composed of fewer than three companies or of three or more if the industry is dominated by one or two companies. An asterisk in place of any statistics indicates that disclosure is not possible. To prevent residual disclosure of a confidential statistic, it has been necessary to suppress other statistics.

Disclosure of the number of establishments belonging to any particular industrial group is not governed by the Act and, therefore, these statistics are presented in all tables.

MORE RECENT DATA

Current estimates of the values of shipments of goods of own manufacture are published each month in the Alberta Statistical Review. The shipment values are published in that report for the 20 industry groups within the manufacturing sector. These preliminary estimates, based on a monthly survey of manufacturers, are available about six weeks after the end of the reference month. Each year when the annual Census of Manufactures data become available, this series is adjusted to the new census totals.

ACKNOWLEDGEMENTS

Appreciation is extended to the many establishments which regularly provide the statistics necessary for the preparation of this publication. In addition, we wish to acknowledge the co-operation and assistance provided by the Manufacturing and Primary Industries Division, Statistics Canada, in the conduct and sharing of statistics of the annual Census of Manufactures.

HIGHLIGHTS

This section summarizes in table form: the relative importance of manufacturing to the Alberta economy, the proportion of labour in manufacturing to the total employed labour force in Alberta, and the value of shipments by industry group and selected Alberta centres.

Table I - Statistics summarize the contribution of Alberta's manufacturing industry to the total value added by goods producing industries, 1971-1975.

Table II - Statistics summarize the contribution of Alberta's manufacturing industry to gross domestic product, 1971-1975.

Table III - Statistics compare the number of persons employed in manufacturing industries to that of the total employed labour force in Alberta.

Table IV - Statistics summarize the total value of manufacturers' shipments by industry group, 1974 and 1975.

Table V - Statistics summarize the value of shipments for selected Alberta centres.

TABLE I - CONTRIBUTION OF MANUFACTURING INDUSTRY TO VALUE ADDED BY GOODS PRODUCING INDUSTRIES, ALBERTA 1971 - 1975

1975	10,645,917	1,581,096	14.9

(r) - Revised.

NOTE: Value added is equal to gross receipts minus the value of goods and services purchased from other industries.

Goods-producing industries include: agriculture, forestry, fisheries, trapping, mining, electric power, manufacturing, and construction.

TABLE II - CONTRIBUTION OF MANUFACTURING INDUSTRY TO GROSS DOMESTIC PRODUCT AT FACTOR COST, ALBERTA, 1971 - 1975

Year	Alberta Total ($'000)	Manufacturing Total ($'000)	Manufacturing as a % of Alberta Total
1971	7,210,000	645,000	9.0
1972	8,043,000	748,000	9.3
1973	9,995,000	903,000	9.0

1975(p)	15,304,000	1,296,000	8.5

(p) - Preliminary.

NOTE: Gross Domestic Product (GDP) at Factor Cost is a measure of the value of goods and services produced by the economy over a particular period. It does not include such non-factor costs of production as capital consumption costs (depreciation) and indirect taxes net of subsidies - costs which enter into the market price of goods and services.
